

ESG Data Quality Escalation

Problem

Institutional clients require ESG data for regulatory reporting. Multiple providers deliver conflicting ESG classifications and incomplete coverage.

Regulatory Requirements

SFDR, EU Taxonomy Regulation.

Options Considered

A: Publish only fully validated data. B: Publish all data. C: Publish data with confidence scores.

Decision

Implement confidence scores for ESG metrics.

Reasoning

Maintain regulatory transparency while preserving data coverage.

Risks

Greenwashing accusations, misclassification risk, reputational risk.
