

Regulatory Template Source Consolidation

Problem

Clients receive EMT, EPT, and EET data from separate feeds with inconsistent identifiers.

Regulatory Requirements

MiFID II, PRIIPs, SFDR template standards.

Options Considered

A: Keep separate feeds. B: Consolidate into unified regulatory template feed. C: Drop low-use fields.

Decision

Consolidate into unified regulatory template feed.

Reasoning

Single access reduces duplication and improves consistency across workflows.

Risks

Migration risk, data model complexity, client testing effort.
