

MiFID Target Market Attribute Gap

Problem

A product manufacturer sends incomplete EMT target market fields for newly listed structured products.

Regulatory Requirements

MiFID II, EMT standards.

Options Considered

A: Block distribution. B: Publish with missing attributes. C: Quarantine until manufacturer remediation.

Decision

Quarantine affected instruments and request corrected EMT fields.

Reasoning

Prevents unsuitable product distribution while preserving data quality controls.

Risks

Delayed time-to-market, client dissatisfaction, manual remediation load.
