

PRIIPs KID Availability Breach

Problem

Retail clients can trade several products where the latest KID is not available in the document hub.

Regulatory Requirements

PRIIPs Regulation, investor protection requirements.

Options Considered

A: Allow trading. B: Restrict retail trading. C: Display stale KID with warning.

Decision

Restrict retail trading until the current KID is sourced.

Reasoning

Retail investors require current key information before execution.

Risks

Lost trading revenue, escalation from sales, document sourcing backlog.
